PROFESSIONAL SUMMARY

Computer Engineering student graduating December 2026 with hands-on internship and lab experience in enterprise networking, network security, systems administration, virtualization, and hybrid cloud infrastructure. Experienced with LAN/WAN environments, VLAN segmentation, FortiGate routing and firewalling, Cisco switching, VPN connectivity, DNS/DHCP/IPAM, VMware environments, Windows/Linux systems, and backup and disaster recovery.

EDUCATION

B.Sc. Computer Engineering

American University of Sharjah

Expected December 2026

Relevant Coursework: Computer Security, Telecommunication Networks, Wireless & Mobile Networks Engineering.

WORK EXPERIENCE

Beta Information Technology – Dubai, UAE

June 2026 – August 2026

Network & Security Engineering Intern

- Deployed a four-VLAN enterprise LAN across a two-node VMware ESXi cluster; configured inter-VLAN routing and firewalling on a FortiGate 60D, Cisco switch trunking, and VPN connectivity.
- Administered 15+ virtualized workloads, including a hardened Linux jump server, three-node PetaSAN storage cluster, Infoblox DNS/DHCP appliances, and NetBox IP address management.
- Configured Acronis Cyber Protect Cloud for encrypted VM and Microsoft 365 backup and disaster recovery; resolved agent authentication and cloud connectivity issues.
- Supported four live client-site visits; secured five wireless SSIDs using MAC allow-listing, guest vouchers, and domain-restricted authentication, and diagnosed a DNS-proxy issue affecting captive-portal logins.

Fun Robotics – Dubai, UAE

June 2025 – August 2025

STEM & Embedded Systems Engineering Intern

- Supported hardware, software, and secure platform configuration across 5+ embedded control system types; delivered technical instruction to 30+ in-person students and 1,000+ remote learners.

TECHNICAL SKILLS

Networking & Security: TCP/IP, LAN/WAN, VLANs, routing & switching, FortiGate, Palo Alto NGFW (training), VPNs, DNS/DHCP, Infoblox NIOS, IPAM, wireless access control, Nmap, Wireshark, SSH, vulnerability assessment

Cloud & Virtualization: Microsoft Azure, Azure Arc, VMware ESXi, Proxmox VE, Nutanix AHV/Prism (training), LXC, QEMU/KVM, Docker Compose, Tailscale, Acronis Cyber Protect, backup & disaster recovery

Systems & Scripting: Linux, RHEL, Windows Server 2022, Active Directory Domain Services, Nginx Proxy Manager, OpenSSL/TLS, Python, C, C++, Git/GitHub

TECHNICAL PROJECTS

Self-Hosted Home Lab Infrastructure | Proxmox VE, Windows Server, Azure Arc

- Built a bare-metal Proxmox platform with LXC containers and QEMU/KVM virtual machines on a segmented network isolated from the primary home network through a dedicated NAT router.
- Deployed Windows Server 2022 as an Active Directory Domain Services domain controller with integrated DNS; configured Nginx Proxy Manager with a self-signed wildcard TLS certificate using OpenSSL.
- Connected systems to Azure Arc for hybrid management; deployed services using Docker Compose, configured remote VPN connectivity with Tailscale, and troubleshot DNS, subnet, VLAN, and certificate trust-chain issues.

NFS Security Assessment & Linux Privilege Escalation Lab

- Identified misconfigured NFS exports using Nmap in a controlled VM lab; demonstrated SSH key injection and a known udev privilege-escalation exploit to validate network and operating-system vulnerabilities.

LEADERSHIP & INVOLVEMENT

Founder & President, AUS Networks & IT Club: Led 20 students delivering technical computer networking events.

Cybersecurity Core Member, GDGoC AUS: Delivered secure coding, and Google cloud platform workshops to 50+ students.

CERTIFICATIONS

ISC2 Certified in Cybersecurity (CC), 2026 | Microsoft Azure Fundamentals (AZ-900), 2026

Additional Training: Red Hat System Administration I (RH124), 2026; Cisco Junior Cybersecurity Analyst, 2026; EC-Council Web Security and Penetration Testing, 2025

LANGUAGES

Arabic: Native | English: Professional Proficiency
