PROFESSIONAL SUMMARY

Computer Engineering student graduating December 2026 with hands-on internship and lab experience in enterprise networking, network security, systems administration, virtualization, and hybrid cloud infrastructure. Experienced with LAN/WAN networking, VLAN segmentation, FortiGate routing, VPNs, DNS/DHCP/IPAM, VMware environments, and Windows/Linux systems.

EDUCATION

B.Sc. Computer Engineering | American University of Sharjah | Expected December 2026

Relevant Coursework: Computer Security, Telecommunication Networks, Wireless & Mobile Networks Engineering, Operating Systems, Computer Systems

WORK EXPERIENCE

BetaIT - Dubai, UAE | Network & Security Engineering Intern | June - July 2026

- Deployed a four-VLAN enterprise lab on a two-node VMware ESXi cluster; configured inter-VLAN routing on a FortiGate 60D, Cisco switch trunking, and LAN/WAN connectivity.
- Administered 15+ virtualized workloads, including a hardened Linux jump server, three-node PetaSAN storage cluster, Infoblox DNS/DHCP appliances, and NetBox IPAM.
- Configured Acronis Cyber Protect Cloud for encrypted VM and Microsoft 365 backup and disaster recovery; resolved agent authentication and cloud connectivity issues.
- Supported four live client-site visits; worked with VPN connectivity and secured five wireless SSIDs using MAC allow-listing, guest vouchers, and domain-restricted authentication; diagnosed a DNS-proxy captive-portal fault.

Fun Robotics - Dubai, UAE | STEM Engineer | June - August 2025

- Supported hardware, software, and secure platform configuration across 5+ embedded control system types; delivered technical instruction to 30+ in-person students and 1,000+ remote learners.

TECHNICAL SKILLS

Networking & Security: TCP/IP, LAN/WAN, VLANs, routing & switching, VPN, Tailscale, FortiGate, Palo Alto NGFW (training), DNS/DHCP, Infoblox NIOS, IPAM, wireless access control, Nmap, Wireshark, SSH, vulnerability assessment

Cloud & Virtualization: Microsoft Azure, Azure Arc, VMware ESXi, Proxmox VE, Nutanix AHV/Prism (training), LXC, QEMU/KVM, Docker Compose, Acronis Cyber Protect, backup & disaster recovery

Systems & Scripting: Linux, RHEL, Windows Server 2022, Active Directory Domain Services, Nginx Proxy Manager, OpenSSL/TLS, Python, C, C++, Git/GitHub

TECHNICAL PROJECTS

Self-Hosted Home Lab Infrastructure | Proxmox VE, Windows Server, Azure Arc

- Built a bare-metal Proxmox platform with LXC containers and QEMU/KVM VMs on a segmented network isolated through a dedicated NAT router; configured secure remote access using Tailscale VPN.
- Deployed Windows Server 2022 as an AD DS domain controller with integrated DNS; configured Nginx Proxy Manager with a self-signed wildcard TLS certificate using OpenSSL.
- Connected systems to Azure Arc for hybrid management; deployed services with Docker Compose and troubleshoot DNS, subnet, VLAN, VPN, and certificate trust-chain issues.

NFS Security Assessment & Linux Privilege Escalation Lab

- Identified misconfigured NFS exports using Nmap in a controlled VM lab; demonstrated SSH key injection and a known udev privilege-escalation exploit to validate network and operating-system vulnerabilities.

LEADERSHIP & CERTIFICATIONS

Leadership: Founder & President, AUS Networks & IT Club - led 20 students delivering technical projects and events; Cybersecurity Core Member, GDGoC AUS - delivered secure coding workshops to 50+ students; McKinsey Forward Program Graduate.

Certifications: ISC2 Certified in Cybersecurity (CC) (2026) | Microsoft Azure Fundamentals (AZ-900) (2026)

Additional Training: Red Hat System Administration I (RH124) (2026); Cisco Junior Cybersecurity Analyst (2026); EC-Council Web Security and Penetration Testing (2025)

Languages: Arabic: Native | English: Professional Proficiency
