

AMEN

CYBERSECURITY

Built to Defend

AMEN: THE FIRST AI-POWERD SECURITY SOLUTION IN THE UAE

Name: Kareem Mahmoud **AUS ID:** 97349

Course: IEN 301 **Section:** 5 **Semester:** Spring 2025

Startup Name: Amen

Slogan: Built to Defend

Introduction

About Us

Our Products

Milestones

Introduction

What is the problem?

66% of UAE organizations reported Breaches in 2025

Average financial loss per breach: **8M AED (\$2.2M)**.

Average Users has **low to Zero** Cybersecurity **Experience**

Our User: The Tech-Savvy Professional

Persona: Ahmed Ali

- Age: 32
- Occupation: Marketing Manager at a Startup
- Location: Dubai
- Tech Savviness: High, daily multi-device use

Needs & Pain Points

- Easy password management
- Protection from phishing and malware
- Reliable security advice
- Frustrated by complex solutions and strong password creation

Interview Participants

Individuals

- 10 interviews
- Ages 22-45, diverse professions
- Representing Dubai, Abu Dhabi, Sharjah

Startups

- 5 interviews
- Various sectors including e-commerce and tech
- Located in Dubai & Abu Dhabi

Methods

In-person, semi-structured interviews enabling open and detailed feedback.

Understanding Our Users: Interview Insights

Interview Questions (Individuals)

1. How do you currently manage your passwords?
2. What are your biggest concerns regarding online security?
3. Experience with security breaches and impact?
4. Most useful features in a security app?
5. Willingness to pay for reliable security?

Interview Questions (Startups)

1. Current security measures in place?
2. Biggest cybersecurity challenges?
3. Importance of data protection?
4. Budget for cybersecurity solutions?
5. Expectations from a security provider?

Solutions....

Amen offers **affordable**, user-friendly, **AI-powered** Secure Software systems built specifically for SMEs and individuals democratizing digital trust across the UAE.

AI ?

Amen has provided users with a generative AI app that helps users to enhance their security levels using their own mobile phones

Eco-Friendly

Rapidly growing Industry

Artificial Intelligence

User-Friendly

Still Growing

Amen آمن

Amen offers affordable, user-friendly, AI-powered cybersecurity built specifically for SMEs and individuals democratizing digital trust across the UAE.

Statistics

Are concerned about their Privacy online

Growing Connections

Anywhere in the UAE

Competitors/Competing Solutions

International Companies

Palo Alto Networks (USA)

CrowdStrike (USA)

Fortinet (USA)

Local Providers

DarkMatter – (Abu Dhabi)

Digital14 – (Abu Dhabi)

CPX Holding – (Abu Dhabi)

Alternative Solutions

Basic antivirus software, firewalls, in-house IT security.

Prototype

Prototype & MVP

Prototype Description: A web-based dashboard that provides a centralized view of the user's security status, including threat detection alerts, vulnerability assessments, and security recommendations.

Automated Vulnerability Scanning

Regularly scans systems for weaknesses.

Real-time Threat Detection

Identifies and blocks malicious activity.

Secure Data Backup and Recovery

Ensures data can be restored in case of an attack.

Amen's system uses a combination of signature-based detection, behavioral analysis, and AI-driven threat intelligence to identify and mitigate cyber threats. The dashboard provides users with clear and actionable insights.

The technologies used (vulnerability scanners, intrusion detection systems, cloud-based backup) are well-established and readily available. The challenge lies in integrating them into a user-friendly platform, which is achievable with skilled software development.

Amen provides:

- Proactive threat prevention
- Reduced risk of data breaches
- Increased data security and privacy
- Cost-effective cybersecurity
- Simplified security management

Our Amen prototype is fully feasible because:

- **Technical Feasibility:** Core AI features like phishing detection and secure password management already exist as modules and can be quickly customized using available AI cybersecurity frameworks.
- **Operational Feasibility:** The MVP is designed to be lightweight — easily downloadable as a mobile and desktop app, requiring minimal user training.
- **Financial Feasibility:** Initial development costs are manageable with seed funding, focusing first on core functions before expanding to premium features.
- **Market Readiness:** Surveys and early interviews show strong demand from SMEs and freelancers for a simple and affordable cybersecurity solution, validating product-market fit.

Market Size Analysis: Cybersecurity in UAE and MENA

Primary Market (UAE SMBs):

Approximately 557,000 SMEs were operating in the UAE at the end of 2022. The UAE cybersecurity market is estimated to be around **USD 0.67 billion in 2025**, with projections reaching **USD 1.21 billion by 2030**.

Secondary Market (MENA Individual Professionals):

A significant and growing number of individual professionals operate across the MENA region. The broader MENA cybersecurity market is estimated at **USD 3.27 billion in 2025**, with a projected growth to **USD 5.87 billion by 2030**.

Market Opportunity:

- UAE's digital economy: \$38B (2023) → Projected \$140B (2031).
- High breach rates:
Cybersecurity spending by SMEs expected to triple.
- Early-mover advantage in a niche segment: localized AI cybersecurity.

Feature	Amen	Traditional Solutions (McAfee, Norton, etc.)
Affordability	High — Affordable for SMEs & individuals	Low — Often expensive, enterprise-level pricing
Ease of Use	Very Easy — Simple UX, fast setup	Moderate — Complex dashboards, tech jargon heavy
Local Adaptation (UAE)	Yes — Arabic language support, local threat intelligence	No — Generic global focus
AI-driven Threat Detection	Yes — Real-time, smart learning	Limited — Signature-based detection, slower adaptation
Target Market	SMEs, Freelancers, Individuals	Mainly large enterprises and tech-savvy users
Deployment Speed	Instant (Mobile/Desktop app)	Slower (Heavy installations, complex configurations)
Customization & Personalization	High — Personal security advice with 'Ask Amen' AI prompt	Low — One-size-fits-all packages
Proactive Security Updates	Continuous, AI-monitored	Scheduled, sometimes delayed
User Education	Built-in simple security tips	Minimal or buried in complex manuals
Brand Trust in UAE	Growing local brand — tailored trust	Foreign brands — less local emotional connection

Detailed Business Model Canvas

Key Partners

- Cloud service providers
- Cybersecurity technology vendors
- Insurance companies

Key Activities

- Software development
- Security monitoring
- Customer support
- Sales and marketing

Key Resources

- Software platform
- Threat intelligence database
- Skilled personnel

Value Propositions

- Comprehensive, affordable, and user-friendly cybersecurity solutions

Customer Relationships

- Online support
- Dedicated account managers
- Training and education

Channels

- Online marketing
- Partnerships
- Direct sales

Customer Segments

- Small and medium-sized businesses
- Individual professionals

Cost Structure

- Development costs
- Operational expenses
- Marketing and sales costs

Revenue Streams

- Subscription fees
- Service fees
- Potential for premium features

Key Issues:

- **Key Partners:** AI developers, security analysts.
- **Key Activities:** Threat detection, continuous updates, user education.
- **Revenue Streams:** Subscription model, freemium upgrades.
- **Customer Segments:** SMEs, freelancers, remote workers.

Financial Projection and Revenue

Year 1:	Revenue: \$50,000,	Expenses: \$150,000,	Profitability: -\$100,000	(Initial investment in development and early marketing)
Year 2:	Revenue: \$200,000,	Expenses: \$250,000,	Profitability: -\$50,000	(Early customer acquisition, continued investment in growth)
Year 3:	Revenue: \$500,000,	Expenses: \$400,000,	Profitability: \$100,000	(Significant revenue growth, achieving break-even and initial profit)
Year 4:	Revenue: \$1,200,000,	Expenses: \$700,000,	Profitability: \$500,000	(Strong market traction, increasing profitability margins)
Year 5:	Revenue: \$2,500,000,	Expenses: \$1,300,000,	Profitability: \$1,200,000	(Mature growth, sustained and significant profitability)

Item/Metric	Year 1	Year 2	Year 3
Users (Cumulative)	1,500	5,000	10,000
Average Revenue per User (ARPU)	600 AED/year	650 AED/year	700 AED/year
Total Revenue	900,000 AED	3,250,000 AED	7,000,000 AED
Operating Costs	600,000 AED	1,200,000 AED	2,000,000 AED
Net Profit (Before Tax)	300,000 AED	2,050,000 AED	5,000,000 AED
Customer Acquisition Cost (CAC)	100 AED per user	80 AED per user	70 AED per user
Break-even Point	Month 16–18	—	—
Churn Rate	10%	8%	6%

6-Month Milestones & Financing

Investment Required: We require **\$250,000** in Seed Funding to strategically accelerate our product development roadmap, enabling us to finalize key features and launch our initial go-to-market strategy.

Sources of Funding:

- Seed Funding: Angel investors, venture capitalists.
- Grants: Government or industry grants for technology startups.
- Personal Investment: Founders' contributions.

Financial Results Expected:

- Year 1: Achieve break-even point, acquire 500 paying customers.
- Year 3: Generate significant revenue, achieve profitability, expand to other MENA countries.
- Year 5: Revenue: \$2,500,000, Expenses: \$1,300,000, Profitability: \$1,200,000 (Mature growth, sustained and significant profitability)

"Imagine a UAE where cybersecurity is no longer a privilege, but a right. Amen is the key. Join us to democratize digital trust — starting today."

Thank you

Kareem Mahmoud
